2. AIMING OF THE FIXTURE MOUNTED ON FRANGIBLE LOWERING MAST

For the installation of the light on frangible lowering pole the following steps are suggested.

1. Place mast in down position on a support at level (see fig. 1).
2. Using the light sight (P/N 332.3240) mounted on the upper part of the pole, determine the repose angle of the pole.
3. Install the light unit, complete with adapter plate, on the top of the pole through the special support.

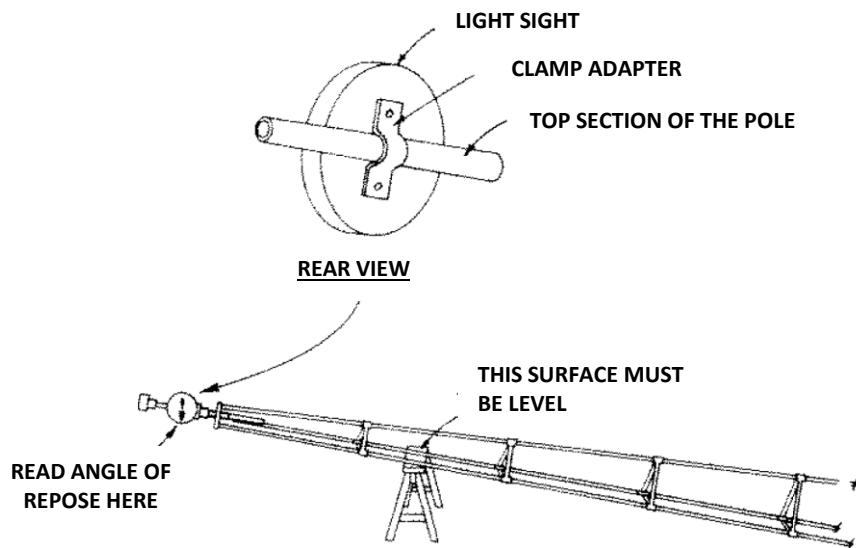

Figure 1: frangible lowering pole in down position

2.1 HORIZONTAL AIMING

1. Attach the light sight to the adapter as shown in figure 2.
2. If the pole is already aimed in respect to the runway centreline, the fixture must be rotate so that the light sight is 0° o 90°.
3. If the pole is parallel to the runway centerline, fixture must be rotate toward the runway centreline of an angle as required by the international rules.
4. Fasten the fixture by means of the four screws of the special support (fig. 3).

2.2 VERTICAL AIMING

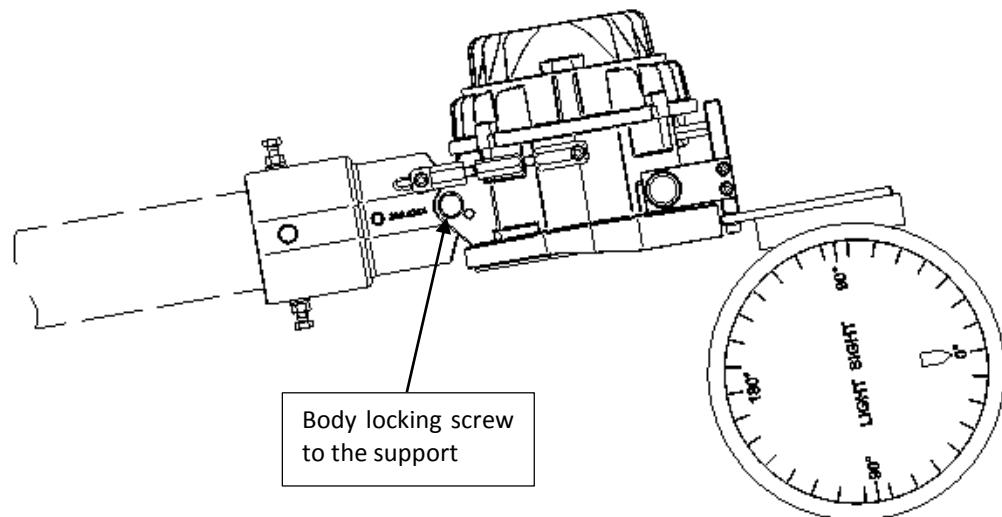

Figure 4: light sight position for vertical aiming

1. For the vertical aiming attach the light sight as per figure 4.
2. Be sure that both the screws with washer, which locks the body to the special support and act as fulcrum, are loosen (fig. 4).
3. Operate the vertical aiming adjusting device (tie-rod) (fig. 5) until the light sight in free-wheeling mode reads the required angle.

Example:

Elevation desired angle: 8°

Measured angle of repose: 10°

To properly aim the fixture in the vertical plane, operate the vertical aiming adjusting device (tie-rod) until the light sight reads 80° (90° - 10°) and then 72° (80° - 8°).

4. Put the light sight in lock mode and attach a nylon cord. Raise the mast and tighten it
5. Raise the mast. Pull the nylon cord and allow the light sight to come to rest so. Release the cord.
6. Lower the mast and read the angle direct from the light sight to make the final adjustment, operating as before described.
7. Finally tighten the 2 screws which lock the fixture body to the special support (fig. 4).
